

Özet

Github hesabının oluşturulması
Projenin bilgisayara çekilmesi
Flask dökümanı takip edilerek projenin ayağa kaldırılması
Api çağrısının projeye eklenmesi
İlgili API'ya Subscription
Postman ile HTTP request gönderilmesi
API token bilgisinin koda eklenmesi
API'dan gelen datanın web arayüzünde gösterilmesi
Form input ile veri çekilmesi

Task 1:

Pull template of the project from this repo.

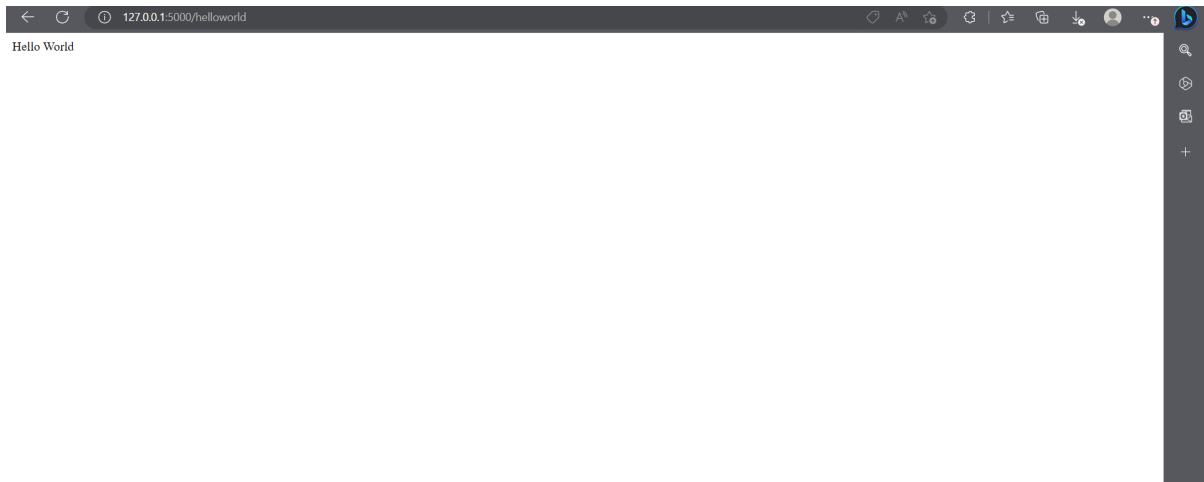

<https://github.com/mesat/ytu-case-template>

Create a rest api in Python with using Flask Framework.

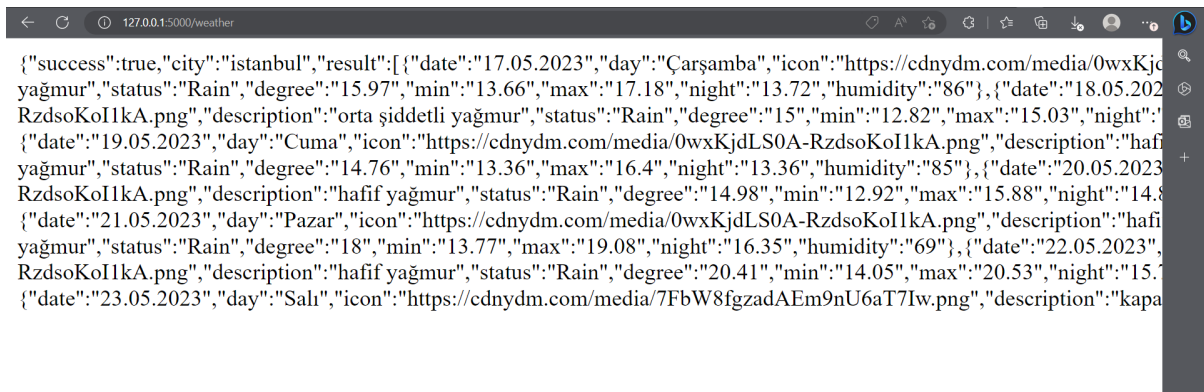

- Create a hello world endpoint and send a get request to it from Postman. (localhost:5000/helloworld)
- Choose an example from API Marketplace in [API Marketplace - Find Awesome APIs | CollectAPI](#)
Than send a request from Postman to check access. Don't forget to add required headers.
- Create an endpoint for access one of [API Marketplace - Find Awesome APIs | CollectAPI](#) API's.
- Add required headers to your request.
- Sent a request from your endpoint and fetch data.
- Display this data in a html site.

Example demo app:

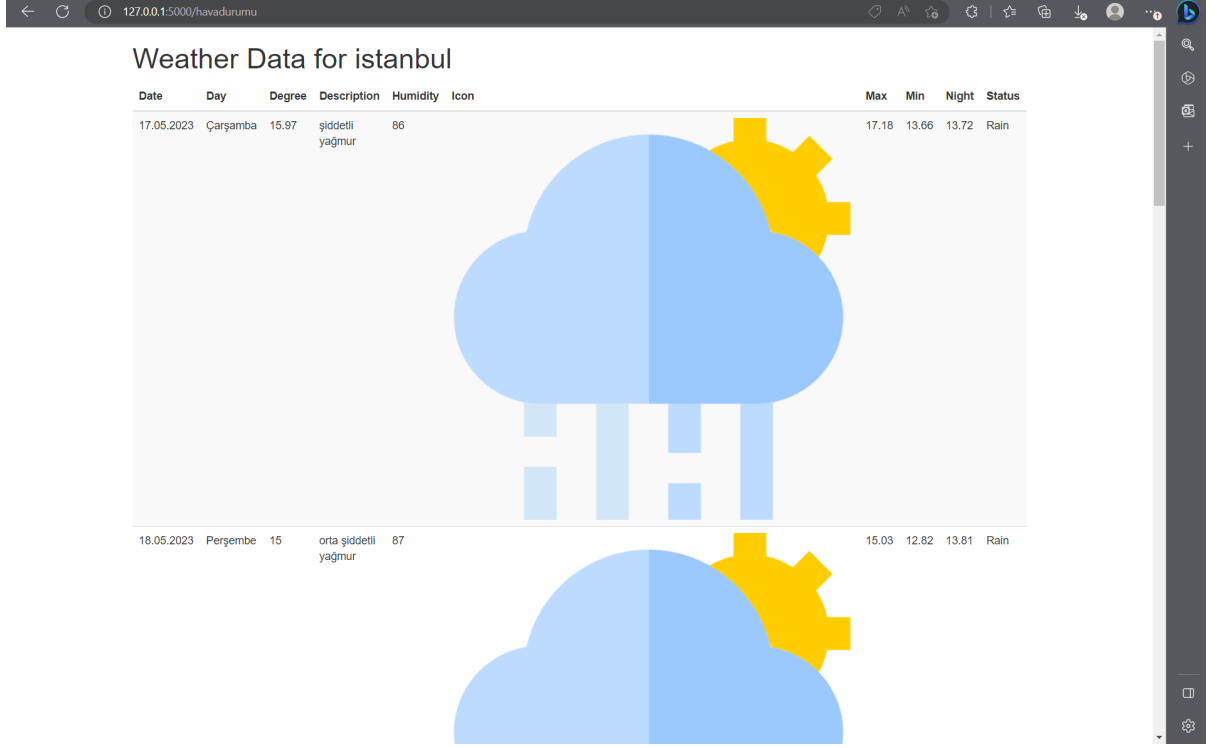

Hello world endpoint:

Fetching JSON data from collectapi.com:

Transfer and show this data in a HTML site (You can use CSS, Bootstrap CSS etc. it's up to you):
